## Quality Air Solutions

Quality Air Solutions is the premier distributor of Parker Balston products. We have represented Parker Balston with experience in the compressed air industry since 1985.

Specializing in air compressors, air filters, air dryers, vacuum pumps, nitrogen generators, breathing air systems, compressor oil, and compressor parts, we strive to be your one-stop source for all your compressed air needs.

Founded in 2010 by Mike Simmons, Quality Air Solutions is dedicated to solving compressed air problems in manufacturing plants, hospitals

and food processing plants in the Midwest and Southeast. We also work with the aerospace and power generation industries.

Together with Parker Balston, Quality Air Solutions has the technology to provide plants with food grade sterile compressed air. While compressed air filtration is our main focus, we also specialize in onsite nitrogen gas generation in many of the same industries for blanketing, laser cutting and food packaging.

What makes Quality Air Solutions exemplary is our commitment to our customers. They trust us to offer impactful solutions—and we value that charge. Our clients are the reason we thrive and continue to grow. With offices now in Kansas City, Chicago and Kentucky, we are dedicated to serving our expanding territory.

Even as our service area grows, our small business ideals remain the same. We hold ourselves to the highest standards for quality and service. Our mission: Present solutions to our customers' compressed air issues, provide outstanding customer service and sell superior products with on time delivery and fair pricing.

Please contact us for any of your compressed air and nitrogen generation questions. ●
