

## SARIN ENERGY SOLUTIONS

CLASS  
OF  
2017

SARIN Energy, Kansas City's premier commercial LED lighting company is proud to be involved in the 25 Under 25 program. Since moving into our new and improved office in Overland Park, we continue to provide the same personal service now with the resources of a much larger company.

We have expanded our offerings with an exciting new product line to serve various industries. These products incorporate the

latest efficient LED technological advancements with vibrant and modern designs. This makes it even easier for businesses to make the switch for reduced utility and maintenance costs with the custom style to match their brand. The old abandoned water tower in Topeka is an example of the way in which

SARIN balances function with design. Our lighting transformed the simple vacant structure into a work of art (see photo above).

Opening another office in Houston has extended our reach to an even wider audience so we may continue to help reduce the carbon footprint. We believe sustainability is key for our future, and LEDs have many benefits aside from low energy consumption. LEDs produce less heat, are constructed without harmful materials, lower waste due to high durability and parts can even be recycled.

SARIN Energy continues to be a leader in the industry by keeping pace with the latest innovation in LED technology development. Visit [www.sarinenergy.com](http://www.sarinenergy.com) to see the range of products and services we provide for companies to take advantage of everything LED technology has to offer. With SARIN, the future is looking brighter than ever. ●
