

TECHNICAL COMMISSIONING & ENGINEERS

sys-tek

CLASS
OF
2007

“The greatest accomplishment this company has achieved and will continue to strive for is simple: It is our staff.”

Gary Short made that statement in 2007. During the last 10 years, engineering and technical commissioning firm sys-tek has focused on developing key personnel to extend its expertise and capabilities.

Developing the Team

sys-tek has added several key staff during the last decade. We instill in our team members to be passionate and enthusiastic on every project we are a part of, regardless of whether it is a couple thousand dollars in construction or \$50 million. We are

a team that works together on every project. There is no second string, no C-team. Sure, this limits us from working on some projects, but to us it isn't about quantity. It's about quality and being on the right project, using our skill sets as a team to produce results at a very high level—something we just cannot compromise.

Creating Experts

sys-tek is proud to hold numerous certifications with professional organizations such as BCA, LEED, ASHRAE and NEBB. We invest in developing our employees by encouraging our project managers and office staff to get certifications and advance their ongoing education and skills in our markets or in their jobs.

Today, we maintain a focus on life sciences, medical facilities, higher education, and mission critical facilities. This includes hospitals, research laboratories, bio-technical pharmaceutical manufacturing, animal holding, data centers and telecommunication. In these markets, our skill set excels, and we can assist our clients with expertise to help them operate, maintain and upgrade their facilities.

Continued Growth

In 2009, sys-tek opened an office in Houston. Short said, “We already had several key customers in Houston, and could see good opportunity for building a customer base that fit perfectly with our skill set.” ●
